Successful SAT in Jeddah & Riyadh

The two 600+ channel systems delivered for the control centres of the General Authority of Civil Aviation in the Kingdom of Saudi Arabia have successfully passed the Site Acceptance Tests (SAT) in Jeddah and Riyadh. The recorders are connected to Schmid Telecom's voice communications switch and Thales' Eurocat X radar systems.

Karim Hechem

We would like to introduce an additional member of the VoiceCollect® sales team: Karim Hechem.

Based in our Middle East office in Abu Dhabi, Karim will support ATIS' partners in this region using his skills in Arabic, English and French. His tasks involve developing voice recording solutions meeting customers' requirements.

Vattenfall relies on VC-MDx

Vattenfall, one of Europe's largest power generation companies, has decided to equip their control centres at Schwarze Pumpe with VC-MDx voice recorders.

Schwarze Pumpe ("Black Pump") is a coal mining area in East Germany in which Vattenfall operates mining and power generation plants. In this project, ATIS co-operates with the company Damovo for supplying and integrating the voice recording systems.

UHER Universal

With its new UHER Universal system, ATIS has resorted to the traditional reel-to-reel-based recorders which were the core application equipment of former years. The UHER Universal solution is specially designed for conference recording purposes in parliaments, ministries, courts, congresses, etc. The recorder can be remote-controlled by a conference system and stores the data on Compact Flash cards. A brochure and the technical specification of the UHER Universal solution will be available soon.

UHER

Summer Party

On 8 August, our annual Summer Party was held at our company premises in Bad Homburg. This was a good opportunity to thank all members of staff for the excellent work done in the past six months and to exchange ideas and information in an informal atmosphere.
